

Rushabh Ingle

Software Engineer | React.js · Node.js · Next.js | Pune, Maharashtra
rushabh.ingle2111@gmail.com | +91 9130257202 | LinkedIn | GitHub | Portfolio

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python

Frontend: React.js, Redux, Zustand, Next.js, TanStack Query, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, JWT Authentication, OAuth 2.0, Socket.IO

Databases: PostgreSQL, MongoDB, Prisma ORM, Drizzle ORM, Qdrant

Cloud & DevOps: AWS, Docker, Git, Vercel, Render, Postman

AI / LLM Integration: OpenAI API & Agent SDK, LangChain, RAG Pipelines, Embeddings & Vector Search

PROFESSIONAL EXPERIENCE

Associate Software Engineer

Apr 2026 – Present

Wargstech

Pune, India

- Building an in-house video-on-demand processing and streaming pipeline — handling upload, transcoding into adaptive bitrate renditions, storage, and delivery — replacing a third-party managed video service and cutting streaming costs by 45%.
- Gathered requirements from a state council client and translated them into a working portal for practitioner registration and provisional certificate issuance, supporting bulk batch registration via Excel uploads, batch payments, and end-to-end application tracking.
- Architected the React frontend around reusable, composable components with centralised state and route-level code splitting, keeping dashboard interactions responsive across large datasets.
- Deployed and configured backend services on AWS EC2 with S3-backed storage, and authored internal deployment documentation covering launch templates, user data scripts, and auto scaling.
- Triage and resolve production issues across the stack — API failures, data inconsistencies, and deployment misconfigurations — using log analysis and reproducible test cases to keep client impact minimal.

Web Developer Intern

Oct 2025 – Dec 2025

Bisugen Tech

Pune, India

- Developed role-based admin and designer dashboards in Next.js, implemented REST APIs, and integrated the Razorpay payment gateway and Google Analytics for transaction processing and user behaviour tracking.
- Built a retrieval-augmented chatbot over the company knowledge base — document chunking, embedding generation, and vector similarity retrieval — to ground responses in verified internal content.

MERN Stack Developer Intern

Sep 2024 – Jun 2025

Cuvette Tech

Remote

- Developed and deployed full-stack applications using MongoDB, Express.js, React, and Node.js, implementing authentication, middleware, and REST API integrations.
- Built reusable React components with nested routing and lazy loading to improve dashboard performance and user experience.
- Automated backend workflows using cron jobs for analytics and status updates, reducing manual operational effort.

PROJECTS

Anvay AI — Financial Research Platform | *Next.js, TypeScript, PostgreSQL, OpenRouter, Tavily, LlamaIndex*

[Link](#)

- Architected project-based research workspaces, keeping conversation history and generated artifacts isolated per project.
- Designed an integration layer combining live web search (Tavily) and PDF document retrieval (LlamaIndex) as external data sources for the application's tool-calling pipeline.
- Designed a tool-calling layer that lets the application autonomously generate and edit structured financial artifacts (spreadsheets, tables, reports) from natural-language input.

ORYN — B2B Video SaaS Platform | *React 19, Vite, TanStack Query, Zustand, Node.js, Express, Whisper*

[Link](#)

- Built a full-stack B2B SaaS platform end to end — teacher dashboard, secure embeddable player, and marketing site — for course creators to upload, protect, and deliver video lectures.
- Implemented a secure, iframe-embeddable video player with AES-128 encrypted HLS streaming (Shaka Player) and signed-token access control for customer sites.
- Built an ingestion pipeline (Whisper transcription with word-level timestamps → indexed search) and a per-video "Ask AI" chatbot with clickable timestamp citations, plus a dashboard with real-time usage analytics and resumable chunked uploads.

Orcabase — RAG-Powered Multi-Tenant SaaS | *React.js, Node.js, PostgreSQL, Qdrant, Docker, AWS EC2, OpenAI Agent SDK*

[Link](#)

- Built a customer-facing embeddable RAG chatbot (Qdrant-backed document embeddings) with a "human mode" — when the bot can't confidently answer, the conversation escalates and gets answered by an admin from the dashboard.
- Built a separate text-to-SQL chat on the admin dashboard using an agentic workflow to translate natural-language questions into SQL queries against the organization's own database.
- Designed a lightweight Docker image for secure database connectivity — it handles the actual SQL execution locally inside the client's infrastructure, so credentials and query results never leave their network.

EDUCATION

MIT Academy of Engineering, Pune <i>B.Tech — Mechanical Engineering</i>	2020 – 2024
N.E.S Science College, Nanded <i>HSC — Computer Science</i>	2018 – 2020

CERTIFICATIONS & ACHIEVEMENTS

GenAI with JavaScript — Chaicode
Namaste Node.js — NamasteDev
